BIOGRAPHY

Thomas brings more than 30 years of expertise performing investigations and failure analysis on electromechanical equipment losses, determining equipment valuation, and damage assessments for insurance and legal professions. He specializes in assessments of equipment damage, causation analysis, and electromechanical equipment losses. He provides litigation and expert witness services, and his expertise has been utilized in numerous insurance cases.

Thomas' background includes professional project management regarding tangible and intangible property loss recovery operations for a geographic region consisting of thirteen states and the Caribbean. Additionally, he has directed restoration services on losses caused by fires or other natural disasters, specializing in the restoration of industrial equipment. He has assisted on many claims involving high-end residential automated systems and has participated in numerous large restoration projects, including the 1993 World Trade Center restoration.

REPRESENTATIVE ASSIGNMENTS

Volcano Damage | Communications and postal equipment | Papua, New Guinea

Inspection to determine possibility of restoration after catastrophic eruptions of two volcanos on the Island of Rabaul. (Tavurvur and Vulcan).

Explosion | Manufacturing Equipment | Bennington, Vermont

Manufacturing equipment restoration at a battery plant after a disastrous lithium explosion. Supervised the collection of wipe samples and conducted the analysis of those samples on site. The analysis confirmed the effectiveness of the restoration process.

Fire/Water Damage | Hotel | Salina, Kansas

The client requested confirmation of the cause of loss, and to determine costs necessary to return the hotel equipment to pre-loss condition. Conducted detailed inspection and assessment of elevators, fire alarm, and fire suppression systems.

Fire/Water | Gaming Equipment | Atlantic City, New Jersey

Conducted an analysis of gaming equipment damaged by fire and water damage. The site visit included the collection of wipe samples to determine the possibility of restoration. Coordinated a site visit with an equipment restoration company to obtain an estimate to return the equipment to pre-loss condition.
